TESTIMONIALS:

"I completed the Drillers Helper Course in 2013 and found it to be very beneficial. The hands on practical introductory to this industry, especially being new to the industry, prepared me for the workplace in a way that would otherwise not be possible. I found the instructors to be attentive, thorough, and educating. The time devoted to all sectors of diamond drilling was key to my quick adaptation in the field."

- Ryder

"The Driller's Helper course was well organized and taught by good guys who really know the business. We worked hard and learned a lot about safety, drill mechanics, pumps, core handling, helicopter moves etc. The course gave me an excellent hands-on idea about what this job is. I now work as a driller's helper and love the challenge, the adventure, and the good people I work with."

- Matthew
